KNX T-Objekt-UP • from software version 0.2.0, ETS programme version 2.0 • Version: 14.01.2010.  
Errors excepted. Subject to technical changes.

# Product Description

---

The Temperature Sensor KNX T-Objekt-UP measures ambient temperature. The sensor can receive an external measured value via the bus and process it with the own data to an overall temperature (mixed value).

The KNX T-Objekt-UP provides four switching outputs with adjustable threshold values as well as additional AND and OR logic gates. The sensor has got a PI controller for heating and cooling.

The device is completed with a frame and cover of the switching series installed in the building and thus merges with the interior.

## Functions:

- Measurement of **temperature**
- **Mixed value** from own measured value and external value (proportions can be set in percentage)
- **PI controller** for heating (one or two step) and cooling (one or two step)
- **4 switching outputs** with adjustable threshold values (Threshold values can be set by parameter or via communication objects)
- **4 AND and 4 OR logic gates** with each 4 inputs. Every switching incident as well as 8 logic inputs (in the form of communication objects) may be used as inputs for the logic gates. The output of each gate may optionally be configured as 1 bit or 2 x 8 bits

Configuration is made using the KNX software ETS. The **programme file** (format VD2) can be downloaded from the Elsner Elektronik homepage on **[www.elsner-elektronik.de](http://www.elsner-elektronik.de)** in the "Service" menu.

## Scope of delivery

---

- Sensor board, serves as base plate

You will need *in addition* (not supplied):

- Socket Ø 60 mm, 42 mm deep
- Frame according to the switching programme used in the building
- Cover according to the switching programme

## Technical specifications

Mounting:	In-wall (in socket Ø 60 mm, 42 mm deep)
Dimensions:	Mounting plate approx. 70 × 70 (W × H, mm)
Total weight:	approx. 20 g
Ambient temperature:	Operation -20...+70°C, storage -55...+150°C
Ambient air humidity:	max. 95% R. H., avoid bedewing
Operating voltage:	KNX bus voltage
Bus current:	max. 6 mA, max. 10 mA when programming LED is active
Data output:	KNX +/- bus terminal plug
BCU type:	Own micro controller
PEI type:	0
Group addresses:	max. 184
Allocations:	max. 184
Communication objects:	80
Measurement range:	-40...+80°C
Resolution:	0.1°C
Accuracy:	±0.5°C at +10...+50°C ±1°C at -10...+85°C ±1.5°C at -25...+150°C

The following standards have been considered for the evaluation of the product in terms of electro magnetic compatibility:

Transient emissions:

- EN 60730-1:2000 Section EMV (23, 26, H23, H26) (threshold category: B)
- EN 50090-2-2:1996-11 + A1:2002-01 (threshold category: B)
- EN 61000-6-3:2001 (threshold category: B)

Interference resistance:

- EN 60730-1:2000 Section EMV (23, 26, H23, H26)
- EN 50090-2-2:1996-11 + A1:2002-01
- EN 61000-6-1:2004

The product has been tested for the above mentioned standards by an accredited EMV laboratory.

# Installation and Commissioning

---

**Installation, inspection, commissioning and troubleshooting of the sensor must only be carried out by a competent electrician.**

Disconnect all lines to be assembled, and take safety precautions against accidental switch-on.

The sensor is exclusively intended for appropriate use. With each inappropriate change or non-observance of the instructions for use, any warranty or guarantee claim will be void.

After unpacking the device, check immediately for any mechanical damages. In case of transport damage, this must immediately notified to the supplier.

**If damaged, the sensor must not be put into operation.**

If an operation without risk may supposedly not be guaranteed, the device must be put out of operation and be secured against accidental operation.

The sensor must only be operated as stationary system, i.e. only in a fitted state and after completion of all installation and start-up works, and only in the environment intended for this purpose.

Elsner Elektronik does not assume any liability for changes in standards after publication of this instruction manual.

## Installation position

---

The KNX T-Objekt-UP will be installed concealed within a socket (Ø 60 mm, 42 mm deep) and fitted with a frame and cover from the switching programme used in the building.

In selecting an installation location, please take care that no direct sunlight, heating element or draught from windows or doors will distort the values measured. Infiltration from pipes that lead to the socket where the sensor is installed from other rooms may cause false measurement results, too.

**The sensor may be installed and operated in dry interior rooms only. Avoid condensation.**

## Composition

---

### Front side

---

- 1      *Programming LED*
- 4      *Programming button for teaching instrument*

### Rear view with connection

---

- 1      *Slot for KNX terminal BUS +/-*

## **Assembly**

---

First of all fit the socket with connection. Seal inlet pipes to avoid infiltration. Then screw the base plate onto the socket and position the frame of the switching programme.

Connect the bus line +/- (black-red plug) to the terminals provided on the sensor board of KNX T-Objekt-UP. Screw the board/base plate on the socket. Ensure that the front side with the programming LED and button is directing out of the wall and that the arrows point towards the top.

After teaching the bus fit the frame and cover of the switching programme.

## **Notes on installation**

---

Sensor must not be exposed to water (rain) or dust. This could result in the electronic being damaged. A relative air humidity of 95% must not be exceeded. Avoid bedewing.

# Transmission protocol

---

# Setting of parameters

## General settings

The screenshot shows a software window titled "1.1.5 KNX T-Objekt-UP". Inside, there is a "General settings" tab selected in a left-hand list. The main area of the window is titled "General settings" and contains the following settings:

- Transmission delays after power-up and programming for:
  - Measured values: 5 sec
  - Threshold values and switching outputs: 5 sec
  - Target values and actuating variables: 10 sec
  - Logic outputs: 10 sec
- Maximum telegram quota: 5 Telegrams per second
- Use malfunction object: No

At the bottom of the window are buttons for "OK", "Cancel", "Default", "Info", and "Help".

Transmission delays after  
power-up and programming for:

Measured values	5 s • 10 s • 30 s • 1 min • ... • 2 h
Threshold values and switching outputs	5 s • 10 s • 30 s • 1 min • ... • 2 h
Target values and actuating variables	5 s • 10 s • 30 s • 1 min • ... • 2 h
Logic outputs	5 s • 10 s • 30 s • 1 min • ... • 2 h

Maximum telegram quota	1 • 2 • 3 • 5 • 10 • 20 Telegrams per second
Use malfunction object	No • Yes

## Heating control / Heating control 1. stage (Appears only if heating control is used):

Setting of the controller by	<ul style="list-style-type: none"> <li>• preset applications</li> <li>• controller parameter</li> </ul>
Application (only if controller is set by "preset applications")	<ul style="list-style-type: none"> <li>• Hot water heating</li> <li>• Floor heating</li> <li>• Fan convector</li> <li>• Electrical heating</li> </ul>
Maximum actuating variable is reached at target/actual difference of (Attention: Can only be adjusted if "Setting of the controller by controller parameter")	1°C • 2°C • 3°C • 4°C • 5 °C
Re-setting time in mins (Attention: Can only be adjusted if "Setting of the controller by controller parameter")	1 ... 255
If blocked, the actuating variable shall	<ul style="list-style-type: none"> <li>• will not be sent</li> <li>• send a specific value</li> </ul>
Value in % (not if a specific value is sent)	0 ... 100

With release, the actuating variable follows the control

Presetting for “preset applications”:

	Maximum actuating variable is reached at target/actual difference of	Re-setting time
Hot water heating	5°C	150 min
Floor heating	5°C	240 min
Fan convector	4°C	90 min
Electrical heating	4°C	100 min

### Heating control 2. stage:

(Appears only if two-stage heating control is used)

.....

Target value difference between 1. and 2. stage in 0.1°C	0 ... 100
Type of control of the 2. stage	<ul style="list-style-type: none"> <li>• 2-point-control</li> <li>• PI control</li> </ul>

### If the 2. stage is controlled with 2-point-control:

Hysteresis in 0.1°C	0 ... 100
Actuating variable is a	<ul style="list-style-type: none"> <li>• 1 bit object</li> <li>• 8 bit object</li> </ul>
Value in % (only if actuating variable is an 8 bit object)	0 ... 100
If blocked, the actuating variable shall	<ul style="list-style-type: none"> <li>• not be sent</li> <li>• send a specific value</li> </ul>
Value in % (only if a specific value is sent)	0 ... 100
With release, the actuating variable follows the control	

### If the 2. stage is controlled with PI control:

Setting options see heating control 1. stage.

### Cooling control / Cooling control 1. stage

(Appears only if cooling control is used)

.....

Setting of the controller by	<ul style="list-style-type: none"> <li>• preset applications</li> <li>• controller parameter</li> </ul>
Application (only if controller is set by “preset applications”)	<ul style="list-style-type: none"> <li>• Cooling ceiling</li> </ul>

Maximum actuating variable is reached at target/actual difference of (Attention: Can only be adjusted if "Setting of the controller by controller parameter")	1°C • 2°C • 3°C • 4°C • 5°C
Re-setting time in mins (Attention: Can only be adjusted if "Setting of the controller by controller parameter")	1 ... 255
If blocked, the actuating variable shall	<ul style="list-style-type: none"> <li>• not be sent</li> <li>• send a specific value</li> </ul>
Value in % (only if a specific value is sent)	0 ... 100
With release, the actuating variable follows the control	

Presetting for "preset applications":

	Maximum actuating variable is reached at target/actual difference of	Re-setting time
Cooling ceiling	5°C	240 min

### Cooling control 2. stage:

(Appears only if two-stage cooling control is used)

.....

Target value difference between 1. and 2. stage in 0.1°C	0 ... 100
Type of control of the 2. stage	<ul style="list-style-type: none"> <li>• 2-point-control</li> <li>• PI control</li> </ul>

### If the 2. stage is controlled with 2-point-control:

Hysteresis in 0.1°C	0 ... 100
Actuating variable is a	<ul style="list-style-type: none"> <li>• 1 bit object</li> <li>• 8 bit object</li> </ul>
Value in % (only if actuating variable is an 8 bit object)	0 ... 100
If blocked, the actuating variable shall	<ul style="list-style-type: none"> <li>• not be sent</li> <li>• send a specific value</li> </ul>
Value in % (only if a specific value is sent)	0 ... 100
With release, the actuating variable follows the control	

### If the 2. stage is controlled with PI control:

Setting options see cooling control 1. stage.

**1.1.5 KNX T-Objekt-UP**

## Night lowering

.....

Use night lowering	No • Yes
--------------------	----------

### If night lowering is used:

Use night lowering	<b>Yes</b>
Night lowering for object value	• 1 = active   0 = not active • 0 = active   1 = not active
Value of the activation object before 1. communication	0 • 1
Target value setpoint per	Parameter • Communication object

### If the target value is set per Parameter:

Target value setpoint per	<b>Parameter</b>
Target value heating in 0.1°C (if the heating control is used)	-300 ... 800
Target value cooling in 0.1°C (if the cooling control is used)	-300 ... 800

### If the target value is set per Communication object:

Target value setpoint per	<b>Communication object</b>
---------------------------	-----------------------------

The value communicated last shall be maintained	<ul style="list-style-type: none"> <li>• not</li> <li>• after restoration of voltage</li> <li>• after restoration of voltage and programming (Do not use for first commissioning)</li> </ul>
Start target value heating in 0.1°C valid until 1.communication (if the heating control is used and only if the value communicated last is "not" maintained or "after restoration of voltage")	-300 ... 800
Limitation of object value H(min) in 0.1°C	-300 ... 800
Limitation of object value H(max) in 0.1°C	-300 ... 800
Start target value cooling in 0.1°C valid until 1.communication (if the cooling control is used and only if the value communicated last is "not" maintained or "after restoration of voltage")	-300 ... 800
Limitation of object value C(min) in 0.1°C	-300 ... 800
Limitation of object value C(max) in 0.1°C	-300 ... 800
Type of the target value change	<ul style="list-style-type: none"> <li>• Absolute value</li> <li>• Increment/decrement</li> </ul>
Step size (only with "Increment/decrement")	0.1°C • 0.2°C • 0.3°C • 0.4°C • 0.5°C • 1°C • 2°C • 3°C • 4°C • 5°C

## Frost/heat protection

.....

Use frost/heat protection	No • Yes
---------------------------	----------

## If frost/heat protection is used:

Use frost/heat protection	<b>Yes</b>
Target value heating in 0.1°C (only if heating control is used)	-300 ... 800
Delay of activation (after opening window)	none • 1 s ... 2 h
Target value cooling in 0.1°C (only if cooling control is used)	-300 ... 800
Delay of activation (after opening window)	none • 1 s ... 2 h
Status of window before 1. communication	CLOSED • OPENED

Communication objects logic inputs	do nor release • release
------------------------------------	--------------------------

**AND logic:**

Logic 1 / 2 / 3 / 4	not active • active
---------------------	---------------------

**OR logic:**

Logic 1 / 2 / 3 / 4	not active • active
---------------------	---------------------

## AND Logic 1 / 2 / 3 / 4

1. / 2. / 3. / 4. Input	<ul style="list-style-type: none"> <li>• do not use</li> <li>• all switching events which the sensor provides (see "Linkage inputs of the AND logic")</li> </ul>
Logic output sends	not • one 1 bit object • two 8 bit objects

### If the logic output sends one 1 bit object:

Logic output sends	<b>one 1 bit object</b>
If logic = 1 → object value	1 • 0
If logic = 0 → object value	0 • 1
Communication object AND logic 1 / 2 sends	<ul style="list-style-type: none"> <li>• on change of logic</li> <li>• on change of logic to 1</li> <li>• on change of logic to 0</li> <li>• on change of logic and periodically</li> <li>• on change of logic to 1 and periodically</li> <li>• on change of logic to 0 and periodically</li> </ul>
Send periodically all (only if sending "periodically")	5 s • 10 s • 30 s • 1 min • ... • 2 h

### If the logic output sends two 8 bit objects:

Logic output sends	<b>two 8 bit objects</b>
If logic = 1 → object A Wert	0 ... 255
If logic = 0 → object A value	0 ... 255

If logic = 1 → object B value	0 ... 255
If logic = 0 → object B value	0 ... 255
Communication objects AND Logic 1 A and B send	<ul style="list-style-type: none"> <li>• on change of logic</li> <li>• on change of logic to 1</li> <li>• on change of logic to 0</li> <li>• on change of logic and periodically</li> <li>• on change of logic to 1 and periodically</li> <li>• on change of logic to 0 and periodically</li> </ul>
Send periodically all (only if sending "periodically")	5 s • 10 s • 30 s • 1 min • ... • 2 h

## Linkage inputs of AND logic

## OR Logic 1 / 2 / 3 / 4

1. / 2. / 3. / 4. Input	<ul style="list-style-type: none"> <li>• do not use</li> <li>• all switching events which the sensor provides (see "Linkage inputs of the AND logic")</li> </ul>
Logic output sends	one 1 bit object • two 8 bit objects

### If the logic output sends one 1 bit object:

Logic output sends	<b>ein 1 Bit-Objekt</b>
If logic = 1 → object value	1 • 0
If logic = 0 → object value	0 • 1
Communication object OR Logic 1 / 2 sends	<ul style="list-style-type: none"> <li>• on change of logic</li> <li>• on change of logic to 1</li> <li>• on change of logic to 0</li> <li>• on change of logic and periodically</li> <li>• on change of logic to 1 and periodically</li> <li>• on change of logic to 0 and periodically</li> </ul>
Send periodically all (only if sending "periodically")	5 s • 10 s • 30 s • 1 min • ... • 2 h

### If the logic output sends two 8 bit objects:

Logic output sends	<b>two 8 bit objects</b>
If logic = 1 → object A value	0 ... 255
If logic = 0 → object A value	0 ... 255

If logic = 1 → object B value	0 ... 255
If logic = 0 → object B value	0 ... 255
Communication objects OR Logic 1 / 2 A and B send	<ul style="list-style-type: none"> <li>• on change of logic</li> <li>• on change of logic to 1</li> <li>• on change of logic to 0</li> <li>• on change of logic and periodically</li> <li>• on change of logic to 1 and periodically</li> <li>• on change of logic to 0 and periodically</li> </ul>
Send periodically all (only if sending "periodically")	5 s • 10 s • 30 s • 1 min • ... • 2 h

## Linkage inputs of OR logic

The linkage inputs of the OR logic correspond with the parameters of the AND logic. The OR logic is *additionally* provided with the following inputs:

AND Logic output 1  
 AND Logic output 1 inverted  
 AND Logic output 2  
 AND Logic output 2 inverted  
 AND Logic output 3  
 AND Logic output 3 inverted  
 AND Logic output 4  
 AND Logic output 4 inverted
