Smart Cities. Smart Buildings. Smart Homes.

YOUR PARTNER FOR HOME & BUILDING AUTOMATION

## Our company

Founded in 2000, Intesis Software is a leading manufacturing company of innovative solutions for building and home automation, with headquarters in Barcelona –Spain- and customers in more than 80 countries. Intesis offers an extended and outstanding portfolio of products as a result of a the continuous effort in R&D based on a highly qualified team.

## Our spectrum of services

The product portfolio includes gateways and interfaces for integration, focusing on open technologies and protocols like KNX/EIB, LonWorks, Modbus, BACnet, M-Bus, EnOcean, Wifi and also OEM design and manufacture of interface solutions for all kind of equipment for home and building management and control. The most relevant companies of equipment for building and home automation rely on Intesis products and services worldwide.

## Our brands

The most advanced communication gateway solutions for the integration of different systems: KNX/EIB, LonWorks, ModBus, BACnet, M-Bus, EnOcean, ASCII, OPC, proprietary protocols.

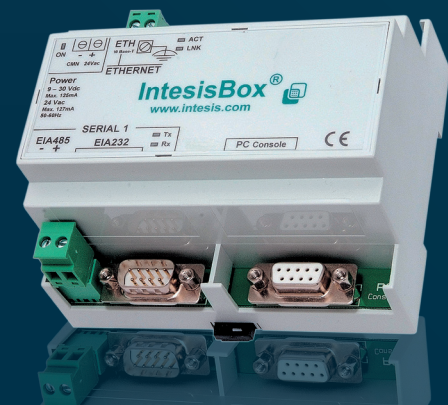

A next generation product range for the home automation markets allowing the user to control air conditioning units through Android and Apple smart phones and tablets, as well as personal computers.

Houseinhand is an application for iPhone, iPad, iPod Touch to control our homes in a very fast and intuitive way, and in real time. Houseinhand connects directly and instantaneously to any KNX installation via a KNX IP router, unlike other server solutions.

## IntesisBox® Communication gateways

- Robust and reliable hardware
- Direct connection to field bus
- Independent management of communications
- Zero maintenance
- Power supply from 9 to 24 Vdc or 24 Vac

## IntesisHome® Your home in the cloud

IntesisHome provides a mind changing user experience when controlling an air conditioning system from anywhere in the world, through Android and Apple smart phones and tablets, as well as personal computers, without the need of dedicated installations or specific knowledge of the users.

It is also a next generation eco-friendly solution that helps to reduce energy consumption of air conditioning systems.

## HouseinHand® Fast. Intuitive. Anywhere.

- Fast. Since it does not need a server, communication is instantaneous. You will see how the status of the lights, blinds and other devices are updated in real time.
- Intuitive. From the first moment you install it, you know how to use it. Houseinhand® is designed to suit all audiences.
- Anywhere. Houseinhand lets you control your home whether you are inside or outside. Turn off lights, turn on heating... The possibilities are endless.

## OEM manufacturing. Software development

Development of customized solutions for all kind of manufacturers of home and building automation systems, offering a robust, reliable and high quality product.

Software development for many applications like air conditioning, lighting, fire and security and custom control and monitoring for PC-based solutions.
